

## SCIENCE Year 8 Curriculum End Points and Key Vocabulary

	Autumn Term 1	Autumn Term 2	Spring Term 1	Spring Term 2	Summer Term 1	Summer Term 2
Ethos Links	<p><b>STEM</b> – Soundproofing, considering implications when planning fire work displays, understanding how substances behave, energy stores and transfers</p> <p><b>Character</b> – Use of alarms to reduce antisocial behaviour</p> <p><b>Sustainability</b> – Generating electricity, renewable and non-renewable resources</p>	<p><b>STEM</b> – Explaining how the body works, evaluating models, designing a menu, representing elements and compounds</p> <p><b>Sustainability</b> – Making food choices</p>	<p><b>STEM</b> – Designing shoes for different situations, explaining changes in population, genetic engineering.</p> <p><b>Sustainability</b> – Responsible breeding, endangered and extinct animals</p>	<p><b>STEM</b> – Designing houses, reducing energy loss, explaining chemical reactions, uses of exothermic and endothermic reactions in different products</p> <p><b>Sustainability</b> - Designing houses to reduce energy loss, efficiency in combustion reactions</p>	<p><b>STEM</b> – Effects of climate change, designing an electromagnet for a purpose.</p> <p><b>Sustainability</b> - Causes/effects/solutions of climate change</p>	<p><b>STEM</b> – Explaining how the body works, use of respiration in food production, explaining observable phenomena, how loudspeakers and microphones work.</p> <p><b>Sustainability</b> – designing a greenhouse to maximise food growth.</p>
Learning End Points	<ol style="list-style-type: none"> <li>1. Waves – Sound</li> <li>2. Reactions – Acids and Alkalis</li> <li>3. Energy – Energy</li> </ol> <p>By the end of these units students will know and understand:</p>	<ol style="list-style-type: none"> <li>1. Organisms – Breathing</li> <li>2. Organisms – Digestion</li> <li>3. Matter – Elements and Compounds</li> </ol> <p>By the end of these units students will know and understand:</p>	<ol style="list-style-type: none"> <li>1. Forces – Pressure</li> <li>2. Genes – Evolution and Inheritance</li> </ol> <p>By the end of these units students will know and understand:</p>	<ol style="list-style-type: none"> <li>1. Energy – Work, Heating and Cooling</li> <li>2. Reactions – Chemical Energy and Types of Reaction</li> </ol> <p>By the end of these units students will know and understand:</p>	<ol style="list-style-type: none"> <li>1. Earth – Climate and the Earth’s Resources</li> <li>2. Electromagnets – Magnets and Electromagnetism</li> </ol> <p>By the end of these units students will know and understand:</p>	<ol style="list-style-type: none"> <li>1. Ecosystems – Respiration</li> <li>2. Ecosystems – Photosynthesis</li> <li>3. Waves – Wave Effects and Properties</li> </ol> <p>By the end of these units students will know and understand:</p>

	<p><b><u>Waves – Sound</u></b></p> <ul style="list-style-type: none"> <li>➤ How sound travels in terms of particles and in solids, liquids, gases and in a vacuum</li> <li>➤ How waves can be viewed and how their form changes when the sound changes</li> <li>➤ How the ear works and causes or permanent and temporary hearing loss.</li> </ul>	<p><b><u>Organisms – Breathing</u></b></p> <ul style="list-style-type: none"> <li>➤ What breathing is and how our body moves air into and out of our lungs</li> <li>➤ What gas exchange is and how the respiratory system is adapted to maximise gas exchange</li> <li>➤ What lung volume is, how it can be measured and factors which affect it.</li> </ul>	<p><b><u>Forces – Pressure</u></b></p> <ul style="list-style-type: none"> <li>➤ How to calculate pressure on a solid and what things effect pressure</li> <li>➤ How products are designed with pressure in mind to be suitable for different situations</li> <li>➤ What causes fluid pressure, including gases and liquids, and why pressure changes with increasing altitude or depth.</li> </ul>	<p><b><u>Energy – Work, Heating and Cooling</u></b></p> <ul style="list-style-type: none"> <li>➤ What work done is and how to calculate it</li> <li>➤ What temperature and heat are</li> <li>➤ How thermal energy can be passed on through conduction, convection and radiation, in solids, liquids, gases and a vacuum.</li> </ul>	<p><b><u>Earth – Climate and the Earth’s Resources</u></b></p> <ul style="list-style-type: none"> <li>➤ The composition of the current atmosphere, the early atmosphere, and what caused the changes</li> <li>➤ How carbon is recycled through the atmosphere and living organisms in the carbon cycle.</li> <li>➤ The causes and effects of the enhanced greenhouse effect and global warming.</li> <li>➤ Finite and renewable resources from the Earth and how they are obtained.</li> </ul>	<p><b><u>Ecosystems – Respiration</u></b></p> <ul style="list-style-type: none"> <li>➤ What respiration is and why it is important</li> <li>➤ The differences between aerobic and anaerobic respiration and fermentation</li> </ul>
	<p><b><u>Reactions – Acids and Alkalis</u></b></p> <ul style="list-style-type: none"> <li>➤ What acids and alkalis are</li> <li>➤ What pH is and how it can be measured</li> <li>➤ How to name salts</li> <li>➤ What neutralisation is and some everyday examples of where it might be used.</li> </ul> <p><b><u>Energy – Energy</u></b></p>	<p><b><u>Organisms – Digestion</u></b></p> <ul style="list-style-type: none"> <li>➤ What digestion is, the parts of the digestive system and how they are adapted for their function.</li> <li>➤ The nutrients needed for a balanced diet and the foods they are found in</li> <li>➤ The consequences of an unbalanced diet, including</li> </ul>	<p><b><u>Genes – Inheritance and Evolution</u></b></p> <ul style="list-style-type: none"> <li>➤ What biodiversity is and why it is important</li> <li>➤ How natural selection occurs and why it is important</li> <li>➤ What causes extinction and the repercussions this may have</li> <li>➤ What selective breeding is, how</li> </ul>	<p><b><u>Reactions – Chemical Energy and Types of Reaction</u></b></p> <ul style="list-style-type: none"> <li>➤ The difference between chemical reactions and physical changes</li> <li>➤ What exothermic and endothermic reactions are</li> <li>➤ The differences between complete and incomplete combustion, why they happen, which is</li> </ul>	<p><b><u>Electromagnets – Magnets and Electromagnetism</u></b></p> <ul style="list-style-type: none"> <li>➤ Magnets and magnetic field, including plotting the magnetic field of a bar magnet</li> <li>➤ The Earth’s magnetic field</li> <li>➤ What electromagnets are and how to build them and factors</li> </ul>	<p><b><u>Ecosystems – Photosynthesis</u></b></p> <ul style="list-style-type: none"> <li>➤ What photosynthesis is and why it is important</li> <li>➤ Where photosynthesis happens, how the reactants get to the leaf, and how the products are removed from the leaf</li> <li>➤ How to test a leaf for starch</li> <li>➤ The structure of a leaf and how this helps it to do photosynthesis</li> <li>➤ The limiting factors for photosynthesis and how conditions can be controlled to</li> </ul>

	<ul style="list-style-type: none"> <li>➤ The 8 energy stores and how energy is transferred</li> <li>➤ The law of conservation of energy</li> <li>➤ How energy can be released from the chemical store in food and how we can measure that</li> <li>➤ How electricity is generated from renewable and non-renewable resources, as well as advantages and disadvantages of this</li> <li>➤ How to calculate power and the cost of energy.</li> </ul>	<p>some deficiency diseases and their causes and symptoms.</p> <p><b><u>Matter – Elements and Compounds</u></b></p> <ul style="list-style-type: none"> <li>➤ The words element, molecule, atom, mixture and compound</li> <li>➤ How symbols are used to represent elements and compounds</li> <li>➤ Naming simple compounds made from a metal and non-metal</li> <li>➤ How some groups of elements make up a sulfate, nitrate or carbonate.</li> <li>➤ How polymers are useful to us and how they can have negative effects on the environment</li> </ul>	<p>it works and why it is important</p> <ul style="list-style-type: none"> <li>➤ What genetic engineering is, how it happens and why it is important</li> <li>➤ The structure of DNA and the work that led to its discovery.</li> </ul>	<p>preferable and risks of them</p> <ul style="list-style-type: none"> <li>➤ What happens in a thermal decomposition reaction</li> </ul>	<p>affecting the strength of electromagnets</p>	<p>maximise plant growth</p> <ul style="list-style-type: none"> <li>➤ The nutrients needed by plants for healthy growth and how to diagnose deficiencies</li> </ul> <p><b><u>Waves – Wave Effects and Properties</u></b></p> <ul style="list-style-type: none"> <li>➤ What transverse and longitudinal waves are and the differences between them</li> <li>➤ Uses of ultraviolet and ultrasound waves</li> <li>➤ How microphones and loudspeakers work</li> </ul>
<p><b>Key Vocabulary</b></p>	<p>Frequency Amplitude Vibration Vacuum</p>	<p>Gas exchange Breathing Digestion Small intestine</p>	<p>Pressure Fluid Altitude Biodiversity</p>	<p>Conduction Convection Radiation Work done</p>	<p>Atmosphere Finite Renewable Reduction</p>	<p>Aerobic Anaerobic Respiration Glucose</p>

	Acid Alkali Neutralisation Salt Energy store Transfer Energy resource	Adaptation Nutrient Deficiency Formula Polymer	Natural selection Evolution Extinction Selective breeding Genetic modification DNA	Exothermic Endothermic Combustion Thermal decomposition Repeatable Reproducible	Electrolysis Greenhouse effect Magnetic field Electromagnet Core Solenoid	Photosynthesis Starch Chlorophyll Stomata Transverse Longitudinal
