

## Year 7 GEOGRAPHY Curriculum End Points and Key Vocabulary

	Autumn Term 1	Autumn Term 2	Spring Term 1	Spring Term 2	Summer Term 1	Summer Term 2
Units of Work	Unit 1: What is geography? <i>What is my place in the world?</i>	Unit 2: Earth Systems <i>Why do we need to understand how the Earth works?</i>	Unit 3: Landscapes UK <i>Why are UK landscapes important?</i>	Unit 4: Tourism <i>How and why do people travel?</i>	Unit 5: Weather and climate <i>What is weather and climate?</i>	Unit 6: Fieldwork Enquiry <i>What is my local microclimate?</i>
Ethos Links	<b>Sustainability:</b> How can understanding physical and human geography help us make more sustainable decisions about the places we live in? <b>STEM:</b> How do geographers use technology and data to understand the world around us?	<b>Sustainability:</b> How can understanding Earth's systems help us protect the planet for future generations? <b>STEM:</b> How do scientists and geographers use technology to study the Earth's structure and systems?	<b>Sustainability:</b> How can we balance the use of natural landscapes with the need to protect them?  <b>STEM:</b> How do scientists and engineers study and shape the landscapes around us?	<b>Sustainability:</b> How can tourism shape the environment in both positive and negative ways? <b>STEM:</b> How have innovations in transport and technology made global tourism possible?	<b>Sustainability:</b> How can we reduce our impact on the climate and protect future generations? <b>STEM:</b> How does science help us understand and predict weather and climate change?	<b>Sustainability:</b> How can understanding microclimates help us design more sustainable and comfortable places to live and learn? <b>STEM:</b> How do geographers use data, graphs, and digital tools to study local environments?
Learning End Points	By the end of this unit students will: <b>Think like a geographer:</b> Ask geographical questions about place, space, and scale. <b>Work like a geographer:</b> Use maps, data, and fieldwork skills. <b>Know like a geographer:</b> Build foundational knowledge for future topics like tourism, population, and global issues.	By the end of this unit students will: <b>Think like a geographer:</b> Ask questions about Earth's structure and processes. <b>Work like a geographer:</b> Use diagrams, models, and data to explore Earth systems. <b>Know like a geographer:</b> Build foundational knowledge of physical geography and Earth science.	By the end of this unit students will: <b>Think like a geographer:</b> Ask questions about how landscapes form and change. <b>Work like a geographer:</b> Use maps, diagrams, and case studies to explore physical geography.  <b>Know like a geographer:</b> Understand the processes that shape the UK's landscapes and how humans interact with them.	By the end of this unit students will: <b>Think Like a Geographer:</b> Ask critical questions about why people travel, how tourism affects places. <b>Work Like a Geographer:</b> Use maps, data, and case studies to investigate tourism. <b>Know Like a Geographer:</b> Understand key concepts such as migration for pleasure, types of tourism, and human-environment interactions.	By the end of this unit students will: <b>Think like a Geographer:</b> Understand how atmospheric processes shape weather and climate. <b>Work like a Geographer:</b> Use data, graphs, and maps to investigate weather patterns and climate zones.  <b>Know like a Geographer:</b> Learn key concepts such as precipitation, temperature, and climate change.	By the end of this unit students will: <b>Think like a Geographer:</b> Ask questions about how and why microclimates vary in different locations. <b>Work like a Geographer:</b> Use fieldwork, data collection, and mapping to investigate local environments.  <b>Know like a Geographer:</b> Understand how physical and human factors influence local climate conditions.

	<p>By the end of this unit students will develop their ability to:  <b>Use</b> a range of maps (including OS maps and digital maps) to locate places and describe spatial relationships. Use compass directions, grid references, and scale to describe location and distance.</p> <p><b>Interpret</b> simple data sets (e.g. population, climate, land use) to identify patterns and draw conclusions.</p> <p><b>Communicate</b> geographical understanding using annotated diagrams, maps, and written explanations.</p> <p>Begin to <b>evaluate</b> how geographical data and tools can help solve real-world problems.</p>	<p>By the end of this unit students will develop their ability to:  <b>Use</b> labelled diagrams and cross-sections to describe the structure of the Earth and key physical processes. Use maps and satellite imagery to locate and describe physical features and Earth system changes.</p> <p><b>Interpret</b> models and animations to explain tectonic activity, rock cycles, and atmospheric systems.</p> <p><b>Analyse</b> data sets (e.g. seismic activity, volcanic eruptions, climate patterns) to identify trends and draw conclusions.</p> <p><b>Communicate</b> understanding of Earth systems through structured explanations and visual representations.</p> <p>Begin to <b>evaluate</b> how scientific and geographical tools help us monitor and respond to changes in the Earth's systems.</p>	<p>By the end of this unit students will develop their ability to:  <b>Use</b> OS maps and topographic maps to identify and describe physical features of UK landscapes. Use fieldwork techniques (e.g. sketching, observation, data collection) to investigate local or virtual landscapes.</p> <p><b>Interpret</b> cross-sections, photographs, and diagrams to explain landscape formation and change.</p> <p><b>Analyse</b> case studies to understand how physical processes and human activity interact in shaping landscapes.</p> <p><b>Communicate</b> findings using annotated diagrams, structured writing, and geographical terminology.</p> <p><b>Begin</b> to evaluate how landscape management strategies balance environmental protection with human needs.</p>	<p>By the end of this unit students will develop their ability to:  <b>Use</b> maps to identify global tourism patterns and destinations. <b>Interpret</b> data on visitor numbers, transport routes, and economic impact.</p> <p><b>Analyse</b> case studies to understand the effects of tourism on people and places.</p> <p><b>Apply</b> fieldwork and enquiry skills to investigate tourism in a local or virtual context.</p> <p><b>Communicate</b> findings using graphs, maps, and structured explanations.</p> <p><b>Begin</b> to <b>evaluate</b> how tourism can be managed sustainably and equitably.</p>	<p>By the end of this unit students will develop their ability to:  <b>Describe</b> and <b>compare</b> weather and climate using key terminology.</p> <p><b>Interpret</b> weather data and climate graphs to identify patterns and trends.</p> <p><b>Use maps</b> and satellite imagery to locate areas affected by extreme weather.</p> <p><b>Evaluate</b> the causes and consequences of climate change using evidence.</p> <p><b>Apply</b> geographical vocabulary and concepts to real-world weather events.</p> <p><b>Think critically</b> about how weather and climate affect people and places.</p>	<p>By the end of this unit students will develop their ability to:  <b>Use</b> school or local area maps to plan and conduct fieldwork.</p> <p><b>Collect</b> and record primary data using observation, surveys, and environmental quality assessments.</p> <p><b>Create</b> and <b>interpret</b> radar graphs and other visual data representations.</p> <p><b>Present</b> findings using a mix of qualitative and quantitative data.</p> <p><b>Draw</b> conclusions and evaluate the reliability of data and methods.</p> <p>Begin to link fieldwork findings to broader geographical concepts and <b>processes</b>.</p>
Key Vocabulary	<ul style="list-style-type: none"> <li>Anomaly</li> <li>Cartographer</li> <li>Characteristics</li> <li>Continents</li> <li>Contour line</li> <li>Environmental, human and physical geography</li> <li>Equator and Meridian</li> <li>Grid reference</li> <li>Hemisphere</li> <li>Latitude and longitude</li> </ul>	<ul style="list-style-type: none"> <li>Atmosphere</li> <li>Biosphere</li> <li>Continental drift</li> <li>Cryosphere</li> <li>Cycles: rock, water and carbon cycles</li> <li>Erosion</li> <li>Fossil fuels</li> <li>Geological time</li> <li>Hydrosphere</li> <li>Lithosphere</li> <li>Non-renewable energy</li> <li>Renewable energy</li> <li>Sustainability</li> </ul>	<ul style="list-style-type: none"> <li>Cavern</li> <li>Erosion</li> <li>Glacier</li> <li>Lithosphere</li> <li>Lowlands</li> <li>Relief</li> <li>Quarrying</li> <li>Processes: erosion, deposition and transportation</li> <li>Stalactites and stalagmites</li> <li>Uplands</li> <li>Weathering</li> </ul>	<ul style="list-style-type: none"> <li>Auschwitz</li> <li>Dark Tourism</li> <li>Disposable income</li> <li>Economic impact</li> <li>Eco- tourism</li> <li>Environmental impact</li> <li>Globalisation</li> <li>Honey-pot site</li> <li>Leisure</li> <li>Mass Tourism</li> <li>Nuclear tourism</li> <li>Recreation</li> <li>Social impact</li> <li>Travel agency</li> </ul>	<ul style="list-style-type: none"> <li>Air pressure</li> <li>Carbon footprint</li> <li>Climate</li> <li>Climate Change</li> <li>Cloud formation</li> <li>Cloud types (cumulus, stratus, cirrus, etc.)</li> <li>Condensation</li> <li>Evaporation</li> <li>Extreme weather</li> <li>Greenhouse effect</li> <li>Meteorology</li> <li>Oktas</li> </ul>	<ul style="list-style-type: none"> <li>Anomaly</li> <li>Bias</li> <li>Environmental quality survey</li> <li>Field sketch</li> <li>GIS</li> <li>Hypothesis</li> <li>Primary data</li> <li>Qualitative data</li> <li>Quantitative data</li> <li>Questionnaire</li> <li>Sample</li> <li>Secondary data</li> <li>Test</li> </ul>
