

## Year 8 GEOGRAPHY Curriculum End Points and Key Vocabulary

	Autumn Term 1	Autumn Term 2	Spring Term 1	Spring Term 2	Summer Term 1	Summer Term 2
<b>Units of Work</b>	Unit 7: Development <i>How do we understand the world?</i>	Unit 8: Threatened Places <i>What places are under threat?</i>	Unit 9: World Resources <i>How do we use our resources?</i>	Unit 10: Population Dynamics <i>How are populations changing?</i>	Unit 11: Sustainable Cities <i>What are the cities of the future?</i>	Unit 12: River Systems (inclusive of fieldwork enquiry) <i>Why are rivers important?</i>
<b>Ethos Links</b>	<b>Sustainability:</b> How can countries grow economically without harming the environment or deepening inequality? <b>STEM:</b> How do geographers use data and technology to measure and understand development?	<b>Sustainability:</b> How can we protect the world's most fragile environments for future generations? <b>STEM:</b> How do scientists and geographers monitor and manage changes in the natural world?	<b>Sustainability:</b> How can we meet today's resource needs without compromising the future? <b>STEM:</b> How do science and technology help us manage and distribute resources more efficiently?	<b>Sustainability:</b> How can countries plan for future population changes in a sustainable way? <b>STEM:</b> How do geographers use data to understand and predict population trends?	<b>Sustainability:</b> How can cities be designed to meet the needs of today without compromising the future?  <b>STEM:</b> How can science, technology, and engineering help solve the challenges of urban sustainability?	<b>Sustainability:</b> How can we manage rivers in ways that protect people and the environment for the future?  <b>STEM:</b> How can science and engineering help us understand and manage river systems and flooding?
<b>Learning End Points</b>	By the end of this unit students will: <b>Think like a geographer:</b> Ask critical questions about inequality, progress, and global change. <b>Work like a geographer:</b> Use data, graphs, and case studies to compare countries and regions. <b>Know like a geographer:</b> Understand how development is measured, why it varies, and how it can	By the end of this unit students will: <b>Think like a geographer:</b> Ask questions about the relationship between people and the environment. <b>Work like a geographer:</b> Use maps, graphs, and case studies to investigate biomes and threats. <b>Know like a geographer:</b> Understand how natural environments function and how they are being changed by human activity.	By the end of this unit students will: <b>Think like a geographer:</b> Ask questions about fairness, access, and sustainability of resources. <b>Work like a geographer:</b> Use maps, data, and case studies to explore global patterns of resource use. <b>Know like a geographer:</b> Understand how natural resources are distributed, used, and contested.	By the end of this unit students will: <b>Think like a geographer:</b> Ask questions about population trends, causes, and consequences. <b>Work like a geographer:</b> Use population pyramids, maps, and data to analyse demographic change. <b>Know like a geographer:</b> Understand how population change affects people, places, and policies.	By the end of this unit students will:  <b>Think like a Geographer:</b> Understand how cities grow and how sustainability can shape their future.  <b>Work like a Geographer:</b> Use data, maps, and case studies to explore urban development and sustainability.  <b>Know like a Geographer:</b> Learn key concepts such	By the end of this unit students will:  <b>Think like a Geographer:</b> Understand how rivers shape the land and influence human activity.  <b>Work like a Geographer:</b> Use maps, diagrams, and data to investigate river systems and flooding.

	be made more sustainable.				as urbanisation, regeneration, and sustainable living.	<b>Know like a Geographer:</b> Learn key concepts such as erosion, deposition, and flood management.
	<p>By the end of this unit students will develop their ability to:</p> <p><b>Define</b> development and explain how it is measured using indicators such as HDI, GNI, life expectancy, and literacy rate.</p> <p><b>Compare</b> levels of development between countries and regions using social and economic data.</p> <p><b>Analyse</b> the causes of uneven development, including physical, historical, political, and social factors.</p> <p><b>Challenge</b> stereotypes and misconceptions about development, particularly in Africa.</p> <p><b>Describe</b> the economic growth of China and evaluate the environmental consequences of rapid development.</p> <p><b>Explain</b> how gender inequality affects development outcomes.</p> <p><b>Evaluate</b> different strategies for achieving sustainable development.</p> <p><b>Apply</b> development concepts and vocabulary to real-world case studies and global issues.</p>	<p>By the end of this unit students will develop their ability to:</p> <p><b>Identify</b> and describe the characteristics of major global biomes and wilderness areas.</p> <p><b>Explain</b> the causes and consequences of threats to different ecosystems, including deforestation, climate change, and human activity.</p> <p><b>Compare</b> the impacts of environmental change across different biomes such as tropical rainforests, savannahs, coral reefs, and cold environments.</p> <p><b>Analyse</b> how plants and animals adapt to their environments and how these adaptations are threatened by human actions.</p> <p><b>Interpret</b> climate graphs and use them to understand biome characteristics.</p> <p><b>Evaluate</b> the effectiveness of conservation strategies, including rewilding, in protecting wilderness areas.</p> <p><b>Apply</b> geographical vocabulary and concepts to real-world environmental issues.</p>	<p>By the end of this unit students will develop their ability to:</p> <p><b>Explain</b> how natural resources are essential for human wellbeing and development.</p> <p><b>Distinguish</b> between physical and economic resource scarcity and their global implications.</p> <p><b>Analyse</b> real-world case studies of water and food insecurity, including causes and consequences.</p> <p><b>Compare</b> different farming methods and evaluate their environmental and economic impacts.</p> <p><b>Interpret</b> data and maps showing the global distribution of key resources like oil, gas, and water.</p> <p><b>Evaluate</b> the sustainability of different energy sources and propose alternatives to fossil fuels.</p> <p><b>Apply</b> geographical vocabulary and concepts to global and local resource issues.</p>	<p>By the end of this unit students will develop their ability to:</p> <p><b>Describe and explain</b> how global and national populations are changing over time.</p> <p><b>Interpret and analyse</b> population data, including population pyramids and census information.</p> <p><b>Evaluate</b> the causes and consequences of population issues such as ageing populations, overpopulation, and migration.</p> <p><b>Compare</b> different types of migration and explain the push and pull factors behind them.</p> <p><b>Apply</b> geographical vocabulary and concepts to real-world case studies of population change and movement.</p> <p><b>Think critically</b> about how population change affects development, sustainability, and global challenges</p>	<p>By the end of this unit students will develop their ability to:</p> <p><b>Describe</b> the global distribution of urbanisation and sustainable cities.</p> <p><b>Compare</b> urban development strategies in different countries using case studies.</p> <p><b>Interpret</b> population data, sustainability indicators, and urban planning models.</p> <p><b>Evaluate</b> the effectiveness of sustainable living strategies in real-world contexts.</p> <p><b>Apply</b> geographical vocabulary and concepts to design and justify a sustainable urban project.</p> <p><b>Think critically</b> about the future of cities and the balance between growth and sustainability.</p>	<p>By the end of this unit students will develop their ability to:</p> <p><b>Describe</b> the journey of a river from source to mouth using maps and diagrams.</p> <p><b>Compare</b> river processes and landforms in different parts of a river's course.</p> <p><b>Interpret</b> topographical maps to assess flood vulnerability.</p> <p><b>Evaluate</b> the effectiveness of river management strategies in different contexts.</p> <p><b>Apply</b> geographical vocabulary and concepts to real-world river systems.</p> <p><b>Think critically</b> about the role of rivers in shaping landscapes and supporting human life.</p>
